

AI ENGINEER INTERN

DESCRIPTION

Develop prototype and operational software systems that employ artificial intelligence technologies. Software engineers contribute to research, design, implementation, coding, testing, debugging, and subsequent deployment of the system. Programming languages used include C,C++ and Java.

Interns at Stottler Henke work on the same projects as full-time employees, applying AI knowledge and techniques to solving real, interesting, and challenging problems for real people and gaining meaningful and valuable job experience in the field of software development.

QUALIFICATIONS

Required:

- Ability to program in Java and C++
- Knowledge of OOD
- Artificial intelligence courses

Desired:

- Artificial intelligence project work
- Completed at least your Junior Year
